Press the **XL** key for 10 seconds to enter in the menú.

10"

Then the display on the left group will show the differents programming options.

tc

With the **S** and **L** keys we increase/decrease the value of it, and with the **XL** key we confirm the modification, returning to the programming menú.

UP

CONFIRM

DOWN

To exit the programming menú, we must search for the "ESC" option and select it using the **XL** key.

Esc

The keypads and displays will be off. To actívate again press the **L** key.

Parameters

Tc – COFFEE GROUP TEMPERATURE

To change the temperature of the coffee group.

Example of sequences:

Next parameter: (L)

or

Modify parameter: (XL)   (S) (L)   (XL)

                    to enter   to adjust   to confirm

Ts – BOILER TEMPERATURE

To change the temperature of the steam boiler.

Tec – PID PARAMETERS

P/I/D/B are parameters to configurate the PID control. We advise not to change.

TEE – STEAM BOILER TEMPERATURE IN STAND-BY MODE

Energy saving temperature of the boiler. It's the temperature at which the boiler will be maintained when it has reached the idle time set in the following TiE parameter.

TiE - Time for the boiler to go into "saving" mode and remain at the temperature set in the previous parameter.

Ud – UNITS OF MEASURE

Degrees Celsius (C) or Farenheit (F).

BARCELONA

P1/P2/P3/P4 – COFFEE PREINFUSION

We can program the "on" time of the preinfusion. The pump "off" time is always three seconds. Maximum seconds are 5 seconds.

Example:

P1: Preinfusion **S** key 1 press (short coffee single)

P2: Preinfusion **S** key 2 keystrokes (short coffee double)

P3: Preinfusion **L** key 1 press (long coffee single)

P4: Preinfusion **L** key 2 keystrokes (long coffee double)

Cr – CHRONOMETER FUNCTION

We can activate or deactivate the display of coffee delivery time.

U – OFFSET TEMPERATURE

This parameter is used to correct the temperature difference between the display group data and the actual temperature value at the output group.

AC - To activate and deactivate the steam boiler

EP- It allows configuring the hydraulic connection as NETWORK or TANK.

SP – Indicates the number of total services of the machine since the last reset to 0.

ST – Indicates the number of total services of the machine.

ESC – To exit of the menú.

To activate the machine press **L** key
